

Patient Portal Solution

With a fully integrated Patient Portal, each Personal Health Record (PHR) is accessible to any patient with an internet connection. Patients can now have control of their health information with a click of a mouse and consult with their physician whether they are in New York or on business in Los Angeles. They can monitor their health, set appointments and even participate in Physician/Patient web-visits. The patient becomes an active and informed participant in his care.

Self Scheduling

With the ability to complete scheduling on-line, patients can view calendars, view openings, and never lose time with frustrating auto-attendant phone systems.

Electronic Forms

Unifi-Med Electronic Forms provides each patient with the ability to complete all of their pre-appointment questionnaires on-line. This not only expedites the transfer of information, but eliminates errors and puts an end to arriving at the physician greeted by a clip board full of forms.

[ERROR FREE, AUTOMATED AND ELIMINATES WAITING ROOM TIME.](#)

Health Information Access

Health problems are unpredictable. You need access to your health information 24/7/365. With Unifi-Med, your medical information is available to you when you need it: day; night; in your home; or in the ER.

[MEDICAL INFORMATION AT YOUR FINGERTIPS, WHERE YOU NEED IT, WHEN YOU NEED IT.](#)

Health Monitoring

Whether you are monitoring diabetes, wear a holter monitor, track contractions, or participate in a sleep clinic, anything you monitor can automatically be uploaded to Unifi-Med. Instant connection and instant results brings your care into the hands of the professionals without you ever leaving your home.

[MONITORED BED-SIDE CARE WITHOUT EVER LEAVING YOUR BED.](#)

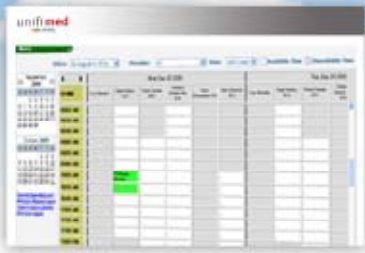

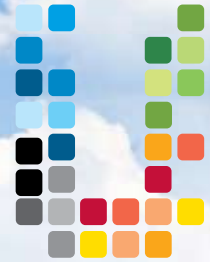

Virtual Visits

Unifi-Med allows physicians and patients to participate in virtual visits. There are times when getting into the office isn't possible or, equally important, preventable. With a virtual visit you need only an internet connection to meet your Physician and receive expert medical care. This is patient care of the next millennium.
